

Daniel Skibinskii

Full Stack Developer

Tel Aviv | 053-697-6970 | skibfan@icloud.com | github.com/skibfan | linkedin.com/in/skibdan

SUMMARY

Full Stack Developer with production experience building and scaling B2C platforms. Skilled in React, Next.js, and Node.js, with a track record of taking unstable products to client-facing releases and refactoring legacy backends without breaking user-facing features. Comfortable across the stack — React, Node.js, GraphQL — and experienced shipping features end-to-end in small, fast-moving teams.

TECHNICAL SKILLS

Frontend: React, Next.js, Redux, JavaScript (ES6+), TypeScript, HTML, CSS, Tailwind, CSS Modules

Backend: Node.js, Express, PHP

APIs & Data: GraphQL, REST APIs, MongoDB

Cloud & DevOps: AWS, Heroku, GitHub Actions (CI/CD)

Other: Git, Agile / Scrum, Flutter (mobile)

EXPERIENCE

Full Stack Developer | TLV Tech | Tel Aviv | Jan 2025 - Feb 2026

- Contributed to two production B2C platforms in a small 2-5 person engineering team, leading React frontend work and contributing to Node.js backend
- Refactored a legacy store backend serving hundreds of daily orders, reducing page load times by ~43% while keeping the React frontend fully operational throughout — zero regressions during the migration
- Stabilized a second product end-to-end (frontend + backend), bringing it from an unstable internal build to a client-facing beta release — reduced bug count, added safeguards, and implemented the payments system
- Built a fraud detection system that automatically flagged suspicious orders and cancelled confirmed fraud, reducing client manual review time from several hours daily to 10–15 minutes
- Implemented microservice-based features for UX improvements and internal tooling using GraphQL and React
- Resolved customer-facing display errors in product asset previews (images and video), eliminating broken media on the storefront
- Collaborated with client management directly — translating their feature requests, designs, and bug reports into shipped product on production infrastructure (AWS, Heroku)

Full Stack Developer - Mobile | Safe | Tel Aviv | Feb 2024 - Dec 2024 (part-time)

- Built a mobile app in Flutter (MVC architecture) from early development through App Store and Google Play submission

Full Stack Developer - Mobile | Fitter | Tel Aviv | Jul 2023 - Oct 2023

- Developed features for a fitness app on iOS and Android using Flutter

EDUCATION

Full Stack Web Development | Developers Institute - TLV Coding Bootcamp | Tel Aviv | Jul 2024 - Nov 2024
Python and JavaScript program

B.Sc. & M.Sc. Enterprise Economics | Plekhanov State University | Moscow | 2018
